

Mathematics & Statistics (XSCH3071)

This paper covers topics in
mathematics and statistics mainly drawn from the mathematics modules and the statistics modules taught up until the end of the first semester in second year. Mathematics is fundamental to the study of Computer Science. Furthermore, in addition to being theoretical, the study of Mathematics and Statistics involve the development of practical skills relevant to Computer Science. In the Mathematics & Statistics examination, candidates will be required to answer four out of six questions on this three-hour examination. There are three sections as follows and students answer at least one question from each section:

> Section A: Two questions based on the study of Mathematics in the Junior Fresh year.
> Section B: Two questions based on the study of Mathematics in the first semester of the Senior Fresh year.
> Section C: Two questions based on the study of Statistics in the Junior Fresh year and in the first semester of the Senior Fresh year.

My plan is to answer 1 from Section A, 2 from Section B, and 1 from Section C.
